## Commercial Tanks and Reservoirs

Overview

## Summary

This chapter contains procedures for the valuation of commercial tanks and reservoirs.
SAMA's 2019 Cost Guide provides directions for the valuation of property by the cost approach; it does not have the force of law.

## Commercial Tanks and Reservoirs

Overview 7.1

Date: 01/2019

## Commercial Tanks and Reservoirs

## Underground Fuel Tank (S805)

## Occupancy Description

Underground fuel tanks used to store automotive and other fuels at service stations and other facilities used to fuel vehicles. The rates are averages for completely installed, fibreglass and steel tanks, including installation, fittings, excavation and backfill. The rates do not include piping.

## Structural Components

Tanks: Rate \$/imp. gal.

| Volume |  | Fibreglass |  | Steel |  | Fibre Coated Steel |  |
| ---: | ---: | :---: | :---: | :---: | :---: | :---: | :---: |
| imp. gal. | USG | Single <br> Wall | Double <br> Wall | Single <br> Wall | Double <br> Wall | Single <br> Wall | Double <br> Wall |
| $\leq 250$ | 300 |  |  |  |  |  |  |
| 458 | 550 |  |  |  |  |  |  |
| 833 | 1,000 |  |  |  |  |  |  |

| $\geq 41,635$ | 50,000 |  |  |  |  |  |  |

## Foundation:

Add \$ / cubic foot for concrete slab foundation.

## Tank Adjustments:

For multiple installations with two or more tanks in one hole, consider the largest tank in the hole as the base and deduct $\%$ for each extra tank.

| Description | Rate (per tank) |
| :--- | :---: |
| Multiple Tank Installation (2 or more tanks in 1 hole) |  |
| Leakage Monitoring System |  |
| Multi-compartment Tanks |  |

Portions of this chapter are not available for viewing due to licensing with Marshall and Swift. Therefore the classification guidelines, rates and factors etc. have been intentionally left blank.

Calculation Procedure

| Description | No. | Page No. |
| :---: | :---: | :---: |
| a) Base Rate $=\left(\mathrm{a}_{1} \times \mathrm{a}_{2}\right)$ |  |  |
| $\mathrm{a}_{1}$ Tank Cost | 7.2 | 1 |
| $\mathrm{a}_{2}$ Tank Volume (imp. gal.) | 3.3 | 1-2 |
| b) Foundation $=\left(\mathrm{b}_{1} \times \mathrm{b}_{2}\right)$ |  |  |
| $\mathrm{b}_{1}$. Foundation Area (cu. ft.) |  |  |
| $\mathrm{b}_{2}$. Foundation Rate | 7.2 | 1 |
| c) Tank Adjustments | 7.2 | 1 |
| d) Value Subtotal = (a + b +/- c) |  |  |
| e) Incomplete Construction Factor | 3.6 | 1 |
| f) Replacement Cost New = d - (d x e) |  |  |

After the replacement cost new (RCN) has been calculated, the assessed value for commercial buildings and structures is determined using the calculation procedures in No. 3.2.

Steel Fuel Tanks

Fibreglass Fuel Tanks

## Commercial Tanks and Reservoirs

## Occupancy Description

Horizontal bulk storage tanks are containers, usually designed for storing a multitude of different products and come in a range of sizes. These are tanks used for various applications including: food processing, oil, water storage, chemical, waste, fuel, etc. The costs are averages for completely installed tanks, including saddles or legs, secondary containment (on tanks greater than 1,000 imp. gal.), and fittings on a foundation.

## Structural Components

Steel Tanks: Rate \$/imp. gal.

| Capacity (imp. gal.) | USG | Rate (\$/imp. gal.) |
| :---: | :---: | :---: |
| $\leq 833$ | 1,000 |  |
| 1,249 | 1,500 |  |
| 1,665 | 2,000 |  |
| 2,498 | 3,000 |  |
| 3,331 | 4,000 |  |
| 4,163 | 5,000 |  |
| 4,996 | 6,000 |  |
| 6,245 | 7,500 |  |
| 8,327 | 10,000 |  |
| 10,409 | 12,500 |  |
| 12,490 | 15,000 |  |
| 16,654 | 20,000 |  |
| 20,817 | 25,000 |  |
| $\geq 24,981$ | 30,000 |  |

Fibreglass or Polyethylene (Plastic) Tanks: Rate \$/imp. gal.

| Capacity (imp. gal.) | USG | Rate (\$/imp. gal.) |
| :---: | :---: | :---: |
| $\leq 104$ | 125 |  |
| 208 | 250 |  |
| 416 | 500 |  |
| 625 | 750 |  |
| 833 | 1,000 |  |
| 1,249 | 1,500 |  |
| 1,665 | 2,000 |  |
| $\geq 2,082$ | 2,500 |  |

Portions of this chapter are not available for viewing due to licensing with Marshall and Swift. Therefore the classification guidelines, rates and factors etc. have been intentionally left blank.

## Commercial Tanks and Reservoirs

Calculation Procedure

| Description | No. | Page No. |
| :--- | :---: | :---: |
| a) Base Rate $=\left(\mathrm{a}_{1} \mathrm{x}\right.$ a2 $)$ |  |  |
| a1. Tank Cost <br> a2. Tank Volume (imp. gal.) | 7.3 | 1 |
|  | 3.3 | $1-2$ |
| b) Incomplete Construction Factor | 3.6 | 1 |
| c) Replacement Cost New $=\mathrm{a}-(\mathrm{a} \mathrm{x} \mathrm{b})$ |  |  |

After the replacement cost new (RCN) has been calculated, the assessed value for commercial buildings and structures is determined using the calculation procedures in No. 3.2.

Steel Bulk Storage Tanks

## Commercial Tanks and Reservoirs

Fiberglass or Polyethylene (Plastic) Bulk Storage Tanks

## Commercial Tanks and Reservoirs

## Commercial Tanks and Reservoirs

## Occupancy Description

Vertical bulk storage tanks are designed for storing a multitude of different products and come in a range of sizes. These are tanks used for various applications including: food processing, oil, water storage, chemical, waste, fuel, etc.

Welded Steel Tanks: Rate \$/imp. gal.
Costs are averages for mild steel welded tanks, including sand and gravel foundations, secondary containment (on tanks greater than 1,000 imp. gal.), fittings and roof. Concrete slab foundations are an additional cost per cubic foot.

| imp. gal. | USG | Rate | Capacity | USG | Rate |
| :---: | :---: | :---: | ---: | ---: | :---: |
| $\leq 833$ | 1,000 |  | 12,490 | 15,000 |  |
| 1,249 | 1,500 |  | 16,654 | 20,000 |  |
| 1,665 | 2,000 |  | 24,981 | 30,000 |  |
| 3,331 | 4,000 |  | 33,308 | 40,000 |  |
| 4,163 | 5,000 |  | 41,635 | 50,000 |  |
| 6,245 | 7,500 |  | $\geq 49,962$ | 60,000 |  |
| 8,327 | 10,000 |  |  |  |  |

## Bolted Tanks: Rate \$/imp. gal.

Costs are averages of 10 to 12 Gauge bolted galvanized tanks, including sand and gravel foundations, secondary containment (on tanks greater than 1,000 imp. gal.), fittings and roof. Concrete slab foundations are an additional cost per cubic foot.

| imp. gal. | USG | Rate | Capacity | USG | Rate |
| :---: | :---: | :---: | ---: | ---: | :---: |
| $\leq 833$ | 1,000 |  | 12,490 | 15,000 |  |
| 1,665 | 2,000 |  | 16,654 | 20,000 |  |
| 2,498 | 3,000 |  | 24,981 | 30,000 |  |
| 3,331 | 4,000 |  | 33,308 | 40,000 |  |
| 4,163 | 5,000 |  | 41,635 | 50,000 |  |
| 6,245 | 7,500 |  | $\geq 49,962$ | 60,000 |  |
| 8,327 | 10,000 |  |  |  |  |

Fibreglass or Polyethylene (Plastic) Tanks: Rate $\$ / \mathbf{i m p}$. gal.
Costs are averages for fibreglass or polyethylene tanks, including sand and gravel foundations, secondary containment (on tanks greater than 1,000 imp. gal.), fittings and roof. Concrete slab foundations are an additional cost per cubic foot.

| imp. gal. | USG | Rate | Capacity | USG | Rate |
| :---: | ---: | ---: | ---: | ---: | ---: |
| $\leq 416$ | 500 |  | 3,331 | 4,000 |  |
| 625 | 750 |  | 4,163 | 5,000 |  |
| 833 | 1,000 |  | 5,413 | 6,500 |  |
| 1,249 | 1,500 |  | 7,494 | 9,000 |  |
| 1,665 | 2,000 |  | 9,992 | 12,000 |  |
| 2,082 | 2,500 |  | 13,323 | 16,000 |  |
| 2,498 | 3,000 |  | $\geq 16,654$ | 20,000 |  |

## Commercial Tanks and Reservoirs

## Foundation:

Add \$ / cubic foot for concrete slab foundation.

Stairways, Walkways and Stiles

| Description | Rate (\$/unit) |
| :--- | :---: |
| Stairways | 3,820 |
| Walkways | 7,110 |
| Stiles | 3,890 |

Portions of this chapter are not available for viewing due to licensing with Marshall and Swift. Therefore the classification guidelines, rates and factors etc. have been intentionally left blank.

## Calculation Procedure

| Description | No. | Page No. |
| :---: | :---: | :---: |
| a Base Rate $=\left(\mathrm{a}_{1} \mathrm{x} \mathrm{a}_{2}\right)$ |  |  |
| $\mathrm{a}_{1}$. Tank Cost | 7.4 | 1 |
| $\mathrm{a}_{2}$. Tank Volume (imp. gal.) | 3.3 | 1-2 |
| b) Foundation $=\left(b_{1} \times b_{2}\right)$ <br> $\mathrm{b}_{1}$. Foundation Area (cu. ft.) <br> b2. Foundation Rate |  |  |
|  |  |  |
|  | 7.4 | 2 |
| c) Value Subtotal = (a + b) |  |  |
| d) Incomplete Construction Factor | 3.6 | 1 |
| e) Value Subtotal = c - (c x d) |  |  |
| f) Stairways, Walkways and Stiles | 7.4 | 2 |
| g) Replacement Cost New $=(\mathrm{e}+\mathrm{f})$ |  |  |

After the replacement cost new (RCN) has been calculated, the assessed value for commercial buildings and structures is determined using the calculation procedures in No. 3.2.

Welded Steel Tanks

## Commercial Tanks and Reservoirs

Welded Steel Tank

Bolted Tank

Polyethylene (Plastic) Tank

Fibreglass Tank

## Commercial Tanks and Reservoirs

Vertical Bulk Storage Tank (S807) 7.4

## Commercial Tanks and Reservoirs

## Occupancy Description

Welded construction tanks used to store gaseous products under pressure.
The rates are for complete installation of tanks on legs or saddle pads, including normal fittings, spot x-ray, primer and fabrication drawings. The rates do not include pipes, valves or foundation.

## Structural Components

Tanks: Rate \$/USG

| Volume |  | Tank Rate <br> (\$/USG) |
| :---: | :---: | :---: |
| imp. gal. | USG |  |
| 104 | $\leq 125$ |  |
| 208 | 250 |  |
| 416 | 500 |  |
| 833 | 1,000 |  |
| 1,249 | 1,500 |  |
| 1,665 | 2,000 |  |
| 2,082 | 2,500 |  |
| 2,498 | 3,000 |  |
| 3,331 | 4,000 |  |

| 12,490 | 15,000 |  |
| 16,654 | 20,000 |  |
| 24,981 | 30,000 |  |
| 37,471 | 45,000 |  |
| 49,962 | 60,000 |  |
| 74,943 | $\geq 90,000$ |  |

Portions of this chapter are not available for viewing due to licensing with Marshall and Swift. Therefore the classification guidelines, rates and factors etc. have been intentionally left blank.

Calculation Procedure

| Description | No. | Page No. |
| :---: | :---: | :---: |
| a) Base Rate = ( $\mathrm{a}_{1} \times \mathrm{a}_{2}$ ) |  |  |
| $\mathrm{a}_{1}$. Tank Cost | 7.5 | 1 |
| a2. Tank Volume (USG) | 3.3 | 1-2 |
| b) Incomplete Construction Factor | 3.6 | 1 |
| c) Value Subtotal = a - $\mathrm{a} \times \mathrm{b}$ ) |  |  |
| d) Stairways, Walkways and Stiles | 7.4 | 2 |
| e) Replacement Cost New = (c + d) |  |  |

After the replacement cost new (RCN) has been calculated, the assessed value for commercial buildings and structures is determined using the calculation procedures in No. 3.2.

## Commercial Tanks and Reservoirs

Refinery and Pipeline Storage Tank (S810)

## Occupancy Description

Large storage tanks are used for the storage of oil or gas at refineries, upgraders and pipeline stations.

## Welded Steel Tanks

The rates include tank, installation, sand or gravel foundation, secondary containment, steel ring curb, and include cone roof with supports, outside ladder, roof and shell manholes, threaded and/or flanged openings, roof vents and paint. The rates do not include catwalks, stairways, and platforms.

## Structural Components

Tanks: Rate \$/barrel

| Volume (barrels) | Rate |
| :---: | :---: |
|  | (\$/barrel) |
| $\leq 2,000$ |  |

| g) Value Subtotal = (e + f) |  |  |
| h) Stairways, Walkways and Stiles |  |  |
| i) Replacement Cost New $=(\mathrm{g}+\mathrm{h})$ | 7.4 | 2 |

After the replacement cost new (RCN) has been calculated, the assessed value for commercial buildings and structures is determined using the calculation procedures in No. 3.2.

## Commercial Tanks and Reservoirs

## Occupancy Description

Pressure tanks are typically located at refineries and upgraders. They are used for the storage of liquids and gas under pressure. The rates are averages including tank, installation, structural supports, normal foundation, secondary containment, and appurtenant equipment. The rates do not include catwalks, stairways, and platforms.

## Structural Components

Spherical Tanks: Rate \$/barrel

| Volume |  |  |
| :---: | :---: | :---: |
| Cu. Ft. | Barrels | Rate (\$/barrel) |
| 4,190 | $\leq 746$ |  |

## Commercial Tanks and Reservoirs

Pressure Tank (S811)

## Calculation Procedure

| Description | No. | Page No. |
| :--- | :---: | :---: |
| $\begin{array}{l}\text { a) Base Rate } \\ \text { a. }\end{array}$ | Tank Cost |  |$)$

After the replacement cost new (RCN) has been calculated, the assessed value for commercial buildings and structures is determined using the calculation procedures in No. 3.2.

## Commercial Tanks and Reservoirs

## Occupancy Description

Tanks made of stainless steel are used to hold and store a variety of substances including food, beverages, chemicals, gas and water. They are usually cylindrical, like drums, but their shape and orientation often varies - tanks are either horizontal or vertical and come in a wide range of sizes. Tanks that are made of stainless steel are designed to not retain any odours and can be cleaned easily as any residues can be easily scraped off. They are built to last a long time against corrosion, cracking and flaking.

The rates include tank, installation and normal fittings.

## Structural Components

Vertical Stainless Steel Tanks: Rate \$/imp. gal.

| Volume |  | Vertical Rate |
| :---: | :---: | :---: |
| imp. gal. | USG | (\$/imp. gal.) |
| $\leq 833$ | 1000 |  |
| 1,249 | 1,500 |  |

## Vaulted Fuel Tanks: Rate $\$ / \mathbf{i m p}$. gal.

Costs are averages for UL-listed cylindrical internal steel tanks encased inside a Precast concrete vault (i.e. vaulted), providing a 2-hour fire wall and ballistic protection. This category includes the Fireguard tank, which is the new generation of fire-rated tanks which also have a secondary containment shell. Costs include support legs, fittings and installation on the foundation.

3.2.

## Commercial Tanks and Reservoirs

## Occupancy Description

Galvanized steel tanks constructed of 13 to 20 gauge corrugate steel and used to store water or other liquid products. The costs are averages for coated, corrugated steel tanks. Rates include conical roof with manhole, freight and typical accessories. For elevated tanks, add tower cost. Concrete slab foundations are an additional cost per cubic foot.

## Structural Components

## Commercial Tanks and Reservoirs

Welded and Bolted Steel Surface Reservoir (S824)

## Occupancy Description

Steel, reservoirs constructed above ground, typically located at industrial sites, and used to store water or other liquid products.

## Structural Components

## Welded Steel Reservoirs: Rate \$/imp. gal.

The rates are average costs of surface reservoirs including typical accessories such as roofs, ladders, painting, fittings on tank, etc. Sand and gravel foundations with steel retaining rings are included on those of $1,000,000$ gallons capacity or less, concrete foundations are included on larger tanks. Concrete foundations are an additional cost.

| Volume |  | Rate (\$/imp. gal.) |
| ---: | :---: | :---: |
| imp. gal. | USG |  |
| $\leq 8,327$ | 10,000 |  |
| 16,654 | 20,000 |  |
